

CHAU HIU MAN, HUMEN

FULL-STACK DEVELOPER | SOFTWARE DEVELOPER

📍 Yau Tong Kowloon District ✉ humenchau@outlook.com 🌐 humen-debug.github.io 🔗 [Humen-debug](#)

Skills

Front-end — Flutter React Native React Vue Next.js AJAX CSS Tailwind CSS i18n
Back-end — Node.js Express.js Feather.js MongoDB MySQL GraphQL InfluxDB Firebase REST APIs
WebSocket
Languages — Java Dart Python TypeScript JavaScript C++
DevOps & Tools — Git GitHub Docker CI/CD Linux Figma

Experience

Software Engineer — Flutter Vue 2 Feather.js MongoDB Docker

BOXS Limited | Hybrid

'22 - '24

- Implemented responsive user interfaces, ensuring cross-browser, cross-platform and devices compatibility
- Architected project structures optimised for maintainability and scalability
- Integrated third-party services / APIs such as payment gateways, geo-location services and social media logins, including Google Maps, Google Pay, Apple Pay, etc.
- Deployed and released applications on cloud-based environments, maintaining staging environments
- Consulted on best practices to optimise applications and websites for speed, usability, and search engine ranking
- Scoped, designed and implemented projects that enabled clients to reach larger audiences

Projects

AR Archaeology App — React Native Expo Three.js React Next.js Feather.js Mongo — [GitHub](#) '24

- An AR app with geo-location services in collaboration with Ararat Plain Southeast Archaeological Project
- Features included authentication, request pagination, batch file downloads, custom filters, real-time syncing in AR scene, offline cache, many-to-many relations
- Servers and a web-based admin panel to enable simplified content management, real-time updates to site information and features
- Automated manual development process of database schema to front-end components
- Key challenges include lazy load and caches, custom search and filter, file storage, client-side state management and database integration
- Integrated with the ideas of spatial data science, algorithm and machine learning to optimise the data storage and efficiency of query

Sleep Tracker — Flutter GraphQL — [GitHub](#)

'23

- A health-care app that provides sleep pattern plans, tracks sleep cycle and generates time-series charts for monitoring progress and efficacy
- Maintained internal custom UI library, writing clear documentation with examples

Education

University of Hong Kong — Bachelor of Engineering in Computer Science

'20 - '24

Relevant Courses — Database systems Computer & communication networks Software Engineering
Machine Learning Distributed & parallel computing Modern tech. on WWW
Interactive mobile app. design & programming

Languages

Cantonese - Native Mandarin - Advanced English - Fluent
